OS library, / Operating System library, is used to automate the commands that we used to type in our terminals in order to complete a task like creating a folder, deleting a folder etc.

SR.NO.	COMMAND	ACTION
1.	import os	using to import os library
2.	os.getcwd()	used to get current working directory
3.	os.chdir()	used to change directory
4.	os.mkdir()	used to create directory in cwd
5.	os.mkdirs()	used to create directory within dir
6.	os.remove()	used to remove empty directory
7.	os.rmdir()	used to remove dir
8.	os.rename()	rename dir
9.	os.getsize()	size of folder in kb
10.	os.path.exist()	return true if dir exist or flase if it is not

Note: in order to use CLI commands in jupyter we should use **!** mark before the command like !touch file.txt !ls !pwd etc
